## PRESS RELEASE

Reftek Systems Inc. is proud to announce that it has purchased REF TEK from Trimble Inc. as of May 13, 2020.

REF TEK products and service have an excellent reputation in the world of seismic monitoring. With equipment installed and operating globally, REF TEK products are used in seismological applications, including local, regional, and global scale networks; arrays for early warning systems and academic study as well as specific asset protection. They have a reputation for high quality products and exceptional support in the field.

Reftek Systems Inc. is a subsidiary of Xeos Technologies Inc. Xeos has a solid reputation for remote monitoring for seismic applications as well as oceanography. Reftek Systems is excited to provide the attention to detail and strong customer support that customers are used to.

"I've known REF TEK original founder, Paul Passmore, for many years and always respected the engineering and ethics behind the company," says Derek Inglis, President of both Xeos Technologies Inc. and Reftek Systems Inc. "Xeos Technologies Inc shares the same commitment to well engineered products that serve customers in difficult situations. We saw the opportunity to meld our service and engineering values with the great folk and products at REF TEK and jumped on board."

Key personnel, such as Leonid Zimakov leading Sales ([leonid@reftek.com](mailto:leonid@reftek.com)) and Antonio Sanchez leading Support ([antonio@reftek.com](mailto:antonio@reftek.com)) as well as key engineering personnel are being retained and are looking forward to continuing to serve existing and new customers.

Leonid remarks, "REF TEK products have been available for many years and are installed all over the world. The change in company name does not mean the products or services will change - we are still here. It does mean a chance to make improvements to better serve our customers, old and new."

Antonio is enthusiastic about ensuring a high level of support continues for customers. "I have worked for REF TEK for almost my entire life and I am just as excited as I was on the first day. I am very pleased to be joining the new Reftek Systems Inc with many more products and opportunities to use science and technology for hazard mitigation while also getting to meet new colleagues and gain new experiences. One thing is for sure, we will continue to provide the best products and services possible in today's changing and challenging markets."

Manufacturing for the REF TEK lines will move to Canada where Reftek Systems is based. Support and sales will remain global functions. Customers with questions should contact [sales@reftek.com](mailto:sales@reftek.com) or [support@reftek.com](mailto:support@reftek.com) as appropriate.
